

Making things: competitively

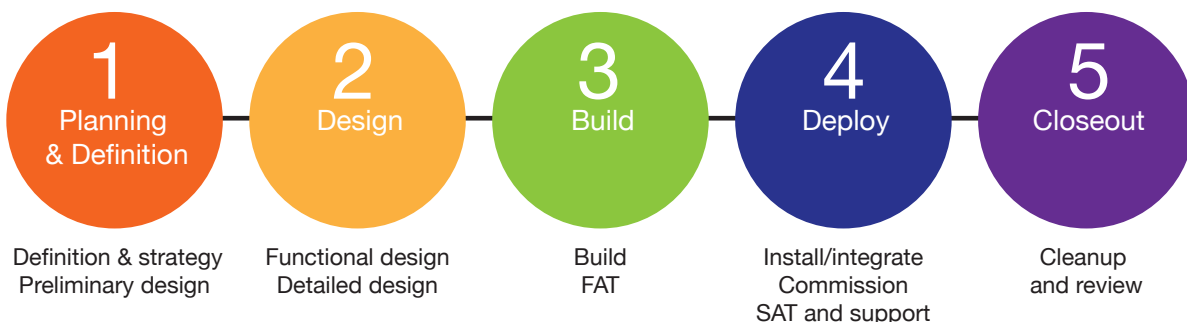

Manufacturing is the driver of local economies. Small and medium manufacturers (SMMs) provide high quality jobs to local workers while keeping innovation in the communities they operate in.

In the face of global competition from large, multinational companies, SMMs must remain competitive by embracing the right technology, increasing productivity, identifying savings and efficiencies, and delivering value to customers.

A design-centric approach to automation technology

JAE Automation takes a design-centric, end-to-end approach to automation technology. Rather than just selling a piece of equipment, we work with you to understand your production process and determine how new technology will fit into your existing machines, processes, and systems. We then design, build, test, configure, and install solutions so that you can make things better and compete while staying local.

This design-first approach allows for collaboration, aligns everyone toward a common goal, and ensures transparency and communication throughout the project.

Think locally, compete globally

As a local company based in the heart of Eastern Ontario, we understand the challenges that SMMs face. With wide ranging expertise and an experienced team, we work to become a trusted member of your team.

Expertise in

- Automation Consulting
- Electrical Control Design
- Electrical Process Drawings
- Manufacturing Safety
- PLC/HMI/SCADA Programming
- Vision Systems
- Robot Integration
- Utilities Information and Control
- Mechanical Design
- 3D Modelling
- Mechanical Drawings
- Packaging Line Integration
- Robot Cells
- Database Programming
- MES Systems
- Custom Builds and Installation
- Onsite Commissioning and Start Ups
- Reporting
- Remote Monitoring
- Support and Maintenance
